Squeegee Blades

BMP's range of Squeegee blades exhibit minimal swelling whilst maintaining hardness, resilience and abrasion resistance throughout life. BMP's sureedge cutting and vision inspection control also means that the functional edge of Squeegee blade can be maintained with a maximum edge radius of 0.003mm.

The enhanced abrasion resistance of squeegees together with the exceptional accuracy of the functional edge means that print quality is constantly high and productivity increased. Squeegees are colour coded for easy visual identification of blade hardness enabling quick selection of the appropriate blade.
